Professional Summary

AI engineer and full-stack developer specializing in multi-agent systems, generative AI, and production-grade backend development using FastAPI, LangChain, and LangGraph. Experienced in architecting agentic AI pipelines powered by the Gemini API, designing scalable REST APIs, and shipping end-to-end systems across intelligent tutoring, urban intelligence, and autonomous procurement domains. Proven track record of delivering LLM-integrated applications that blend system design rigor with real-world impact.

Education

SRM Institute of Science and Technology **Aug 2023 – May 2027**
B.Tech in Computer Science and Engineering (Business Systems) *CGPA: 9.1*

Work Experience

AI & Backend Developer Intern **Feb 2026 – May 2026**
D Advaya FM Pvt. Ltd. (Government Startup) *Chennai, India*
- Engineered RESTful backend services using FastAPI to power AI-driven Identity Verification (IDV) workflows for labor onboarding at scale.
- Designed and implemented document verification and worker authentication modules, integrating multi-step verification pipelines with secure database operations.
- Architected scalable API layers supporting concurrent verification requests, enabling seamless integration with government-facing deployment environments.

AI Intern **Oct 2025 – Jan 2026**
Hovernest Private Limited *Chennai, India*
- Deployed AI-driven drone systems for real-time industrial monitoring, enabling autonomous navigation and low-latency live decision-making under production constraints.
- Developed and integrated production-grade AI inference pipelines to automate operational data interaction and real-time workflow orchestration.

Database Developer Intern **June 2025 – July 2025**
Femtosoft Technologies *Chennai, India*
- Architected scalable backend APIs for real-time applications, reducing response latency by approximately 40% through query optimization and indexing strategies.
- Engineered database schemas with indexing and query tuning techniques across high-traffic production systems, improving throughput under concurrent workloads.

Technical Skills

Languages: Python, C++, JavaScript, SQL

AI / ML: LangChain, LangGraph, Gemini API, TensorFlow, Scikit-Learn, OpenCV, FAISS, Prompt Engineering

Backend: FastAPI, Node.js, Express.js, REST APIs

Frontend: React, Flutter

Databases: MongoDB, Firebase, Supabase

Cloud: AWS (EC2, S3, Lambda)

Tools: Git, Postman, Power BI

Projects

MAEC — Multi-Agent Educational Copilot | ***React, FastAPI, LangChain, LangGraph, Gemini API, Firebase*** **2026**
- Architected a modular multi-agent educational system coordinating Planner, Tutor, Evaluator, Coach, and Critic agents through a FastAPI orchestration layer with centralized prompt and context management.
- Implemented learner-state estimation, adaptive mastery tracking, and personalized learning roadmaps using Firebase Firestore as a real-time knowledge store.
- Built a React dashboard integrating AI chat, curriculum progression, and mastery analytics with full-stack state synchronization via REST APIs.

CityMind AI — Agentic Urban Intelligence System | ***Python, Gemini API, LangGraph, FastAPI*** **2025**
- Designed a multi-agent autonomous system coordinating 5+ AI agents for urban traffic and power distribution analysis using Gemini 2.5 Pro as the reasoning backbone.
- Implemented agent orchestration workflows with tool-calling to enable autonomous data-driven actions over city-scale datasets with real-time contextual reasoning.

Gym Management System — Full-Stack Application | ***React, Node.js, Express.js, MongoDB, REST API*** **2025**
- Built a full-stack MERN gym management platform with real-time class scheduling, member tracking, JWT-based authentication, and secure RESTful backend architecture.
